

Brushcutters

Performance and safety in perfect balance,
Perform like a pro with Husqvarna.

With Husqvarna's new flexible brushcutters in the FR series, the need for the extra trip to the tool shed is gone. The 336FR and 345FR are feature-packed brushcutters that can be equipped with a trimmer head, grass or saw blade and transform from brush-cutting to grass-cutting in no time at all.

 **Husqvarna**[®]

Brushcutters

Powerful and well-balanced clearing saws and brushcutters are created to handle tough, long and demanding shifts. The engine is designed to provide maximum power with low vibration and reduced fuel consumption. The transmissions are specially developed for forestry clearing in order to maximize your performance. All features are combined to create forestry clearing saws that are strong, easy to handle, and make the toughest of forest work easier.

With the FR series, Husqvarna meets the high expectations of demanding landowners. The 336FR and the 345FR eliminate the need for a whole range of different cutting tools, since a machine from the series can be equipped with a trimmer head, grass or saw blade. It's lightweight, it's durable, and it's the easiest way to get a professional result.

Engine power is increased, vibrations are reduced and starting the brushcutter is easier than ever. Both brushcutters are equipped with X-Torq® technology, which increases the power while reducing fuel consumption by up to 20 percent and emissions by up to 75 percent, compared to equivalent machines without this technology.

- ✓ Efficient X-torq technology
- ✓ Commercial-grade power
- ✓ Effective vibration dampening (low vib)
- ✓ Smart start technology
