

# The Zero-Turn Mower

## Zero turn definition

Zero turn means that the unit can complete a 360-degree turn without forward travel. This unique steering method makes these units very maneuverable and fun to operate.

There are so many different makes and models of lawnmowers out there with different specifications, cutting decks and attachments. Not all Lawns are the same shape, size or maintenance level, we know that but how do you know when choosing a lawnmower, which will work best for your lawn care needs? With that being said we hope this will help you in choosing which options will be best for your lawn care needs.

The Zero-turn has become very popular in the consumer side of customers. The Zero-turn is greater value, greater performance for medium to large areas. The Zero turn has been divided into three categories to better suit homeowner, Landscaper and Professional needs, the PZ & P-ZT Series, the MZ & M-ZT series and the RZ series.

## PZ & P-ZT Series

The PZ Series represents the latest in high-performance mowing. Their drive systems, operator interface and cutting deck designs deliver superior cut quality and clipping dispersal, all in higher ground speeds. Careful consideration of components and design not only provide extended durability, but unprecedented ease of service access. The P-ZT Series combines the rugged chassis, heavy-duty casers, convenient interface and clean service access from the PZ Series, with new commercial-duty cutting decks and integrated drive systems. The open Design allows for better access to service areas and the frame also incorporates tie-down points for securing the unit during transport. The deck was developed using CFD (computational fluid dynamics) to optimize air flow for superior cut quality and discharge performance.

- ✓ High-performance Kawasaki FX Series Engines
- ✓ Convenient, intuitive ergonomics and controls
- ✓ Optimized air flow and discharge performance
- ✓ PZ Series 7-gauge fabricated deck
- ✓ P-ZT Series 10-gauge fabricated deck.

## MZ & M-ZT Series

The MZ and M-ZT Series zero-turn mowers from Husqvarna take commercial value to a whole new level. The intuitive operator interface, 13gauge 2+x 3+heavy-duty steel frame and commercial-rated hydraulic system provide the ultimate entry level commercial mowing experience. With durable steel decks that are mulch and collection capable, the MZ and M-ZT mowers are the practical choice for all of your property maintenance needs.

- ✓ Large 22+23+rear tires
- ✓ Mega-sized Welded Steel Frame
- ✓ Commercial-rated Hydraulic Drive Systems
- ✓ Simple Foot-Operated Deck Lift
- ✓ Fabricated 11-Sauge Steel Deck (Select Models)
- ✓ Powerful Engines

## RZ Series

For manoeuvrability, efficiency and convenience in a homeowner zero-turn mower package, the RZ Series really delivers true zero-turn mower performance with twin, maintenance-free integrated transmissions, heavy-duty wide front casters and a rugged tube steel frame. Air induction cutting decks with a reinforced deck trim allow side ejection, optional mulch and collection capable. Convenient control placement, foam padded steering levels and an adjustable seat make RZ Series mowers easy and enjoyable to operate.

- ✓ SmartSwitch and ReadyStart for ride system- Automotive like starting (RZ46i only)
- ✓ Rugged 1.5x2+Tube Frame Design
- ✓ Convenient seat slide spring suspension
- ✓ Fully adjustable and dampened steering levels
- ✓ Fabricated decks featuring twin sheets of 11-gauge steel (select models)
- ✓ High-Performance, Air induction cutting decks
